WHAT IS **BLOCKCHAIN**?

Blockchain is a decentralized, distributed ledger technology that securely records transactions across a network of computers. Each block in the chain contains a cryptographic hash of the previous block, creating a secure link between them. This makes it nearly impossible to alter past transactions without altering subsequent blocks, ensuring the integrity and immutability of the data. Blockchain technology has found applications beyond cryptocurrencies, such as in supply chain management, voting systems, and decentralized finance, due to its transparency, security, and potential for eliminating intermediaries.

WHAT IS DAPP?

A Decentralized Application (DApp) is an application built on a decentralized network that consists of a smart contract backend and a user interface frontend.

DApps are 'permissionless,' meaning anyone is free to use them. Indeed, many DApps include smart contracts others have written. They are also transparent and 'trustless,' meaning anyone can verify their authenticity and functionality. DApps represent a new way of interacting with personal finance. When one thinks of traditional finance, often money lending, borrowing, savings and similar entities come to mind. Each of these is powered, if you will, by a central authority such as banks or other financial institutions.

WHAT IS BEP20?

BEP-20 is a **token standard** developed for the **Binance Smart Chain (BSC)**, designed to extend Ethereum's ERC-20 standard with additional functionality and flexibility. It defines how tokens can be created, transferred, and used within smart contracts on the BSC network.

It allows developers to launch a wide range of digital assets like **utility tokens**, **stablecoins**, and **DeFi tokens**, all while benefiting from **fast transaction speeds** and **low gas fees** on BSC.

BEP-20 tokens are widely used in **decentralized applications (dApps)**, **crypto wallets**, **NFT platforms**, and **decentralized exchanges (DEXs)**. Its compatibility with ERC-20 makes it an ideal choice for developers and crypto projects looking for efficiency and scalability.

WHO IS BEHIND **BEP20**?

BEP-20 was developed by **Binance**, one of the world's largest cryptocurrency exchanges, as a **token standard** for the **Binance Smart Chain (BSC)**.

Key Contributors:

- **Binance Team:** The BEP-20 standard was introduced and maintained by Binance's core blockchain developers.
- **Binance Chain Community:** Open-source contributors, validators, and the broader BSC community helped refine and adopt the BEP-20 framework.
- **Changpeng Zhao (CZ):** As the **Founder and CEO of Binance**, CZ led the vision of creating an efficient and scalable blockchain network like BSC.

Purpose Behind BEP-20:

To create a faster, cheaper, and scalable alternative to Ethereum's ERC-20 tokens while still being compatible with it — enabling smooth migration and adoption.

WHAT IS **SMART CONTRACT**?

A smart contract is a decentralized application that executes business logic in response to events. Smart contract execution can result in the exchange of money, delivery of services, unlocking of content protected by digital rights management or other types of data manipulation such as changing the name on a land title. Smart contracts can also be used to enforce privacy protection by, for example, facilitating the selective release of privacy-protected data to meet a specific request.

Smart contracts are not legally binding contracts. Their main function is to programmatically execute business logic that performs various tasks processes or transactions that have been programmed into them to respond to a given set of conditions. Legal steps must be undertaken to link this execution to legally binding agreements between parties.

ADVANTAGES OF **SMART CONTRACT**

- **Automation** : No need for intermediaries — the contract executes automatically when conditions are met.
- **Transparency** : All terms and transactions are visible and verifiable on the blockchain.
- **Security** : Encrypted and decentralized — resistant to fraud, hacking, or manipulation.
- **Speed** : Immediate execution saves time, especially in cross-border transactions.
- **Cost-Effective** : Reduces fees by eliminating third-party involvement (banks, lawyers, agents).
- **Accuracy** : Removes human errors — everything is handled by predefined code.
- **Trustless System** : Parties don't need to trust each other — trust is placed in the code and blockchain.

IMPORTANT FEATURES WITH T & C

1. World's First 100% Decentralized Verified Smart Contract On Binance Blockchain, Audited By Worldclass Auditors.
2. Trustless, Borderless & Endless Unique System With No Human Interference.
3. Special Elite Circle Rewards \$10,220, Only For Elite Circle Members.
4. Always Keep Sufficient BNB In Your Wallet For Smooth Transaction.
5. Upgrade Your Contribution Any Time With 100% USDT.
6. From The Date Of Activation, Rewards Will Be Credited Every 15 Days.
7. You Are Eligible To Receive On Non- Working Rewards Up To 2x Of Your Contribution Amount.
8. One Time Platform Access Fee Of \$2 Is Also Required.
9. Earn \$14,250 Within 180 Days By Time Bound Rewards.
